Components of the Step 2 CS Exam

1. **Patient Encounters:** Candidates interact with standardized patients (actors trained to present specific medical conditions) in a series of clinical scenarios.
2. **History Taking:** Candidates must collect detailed patient histories, including medical history, social history, and presenting complaints.
3. **Physical Examination:** A vital part of the exam, where candidates demonstrate their ability to perform appropriate physical exams based on the patient's condition.
4. **Communication Skills:** Effective communication with patients is assessed, including rapport building and providing educational information.
5. **Clinical Reasoning:** Candidates must demonstrate their clinical reasoning by formulating differential diagnoses and appropriate management plans.
