Understanding Diabetes

Before delving into the specifics of Mayo Clinic diabetes education, it is essential to understand what diabetes is and its types.

What is Diabetes?

Diabetes is a chronic condition characterized by elevated levels of glucose in the blood. It occurs when the body either does not produce enough insulin or cannot effectively use the insulin it produces. Insulin is a hormone that helps regulate blood sugar levels.

Types of Diabetes

There are primarily three types of diabetes:

- 1. Type 1 Diabetes: An autoimmune condition where the immune system attacks insulin-producing cells in the pancreas. It typically develops in children and young adults.
- 2. Type 2 Diabetes: The most common form, where the body becomes resistant to insulin or does not produce enough. It is often associated with obesity and sedentary lifestyles and is more prevalent in adults.
- 3. Gestational Diabetes: This type occurs during pregnancy and usually resolves after childbirth. However, it can increase the risk of developing type 2 diabetes later in life.

Diabetes education is crucial for managing the disease effectively. The Mayo Clinic emphasizes that understanding diabetes can lead to better decision-making regarding lifestyle choices and treatment plans.
