- **Antidepressants:** Drugs that treat depression and anxiety, such as SSRIs and tricyclic antidepressants.
- **Diuretics:** Medications that promote fluid elimination to control hypertension and edema.

## Pharmacodynamics and Pharmacokinetics

Quiz questions may also address pharmacodynamics (how drugs affect the body) and pharmacokinetics (how the body processes drugs). Understanding these concepts is vital for safe medication use and includes topics such as:

- Drug absorption, distribution, metabolism, and excretion (ADME).
- Receptor binding and drug efficacy.
- Half-life and steady-state concentration.
- Factors influencing drug activity like age, genetics, and organ function.

## Medication Administration and Dosage

Proper medication administration and dosage calculation are critical competencies evaluated by medication quiz questions and answers. These topics assess knowledge of routes, timing, and precise dosing to ensure therapeutic

effectiveness and minimize harm.
