## Overview of Microeconomics

Microeconomics is the branch of economics that studies individual agents, such as consumers and firms, and their interactions in markets. It focuses on how these agents make choices regarding the allocation of limited resources, the factors that influence their decisions, and the implications of these choices on supply, demand, and pricing.

## Key Concepts in Microeconomics

Microeconomics encompasses several key concepts that are crucial for understanding economic behavior:

1. **Supply and Demand:** The foundational model of microeconomics, which illustrates how prices are determined in a market.
  - **Demand:** The quantity of a good or service that consumers are willing and able to purchase at various prices.
  - **Supply:** The quantity of a good or service that producers are willing to sell at various prices.
  - **Equilibrium:** The point where the quantity demanded equals the quantity supplied.
2. **Elasticity:** Measures responsiveness of demand and supply to changes in price or income.
  - **Price Elasticity of Demand:** The percentage change in quantity demanded divided by the percentage change in price.
  - **Income Elasticity of Demand:** Measures how quantity demanded changes as consumer income changes.
3. **Consumer Behavior:** Understanding how consumers make decisions based on preferences, budget constraints, and utility maximization.
  - **Utility:** A measure of satisfaction or pleasure derived from consumption.
  - **Marginal Utility:** The additional satisfaction gained from consuming one more unit of a good or service.
4. **Production and Costs:** Analyzing how firms produce goods and services and the costs associated with production.
  - **Short-run vs. Long-run Costs:** Distinction between fixed and variable costs and how they affect production decisions.
  - **Returns to Scale:** How production output changes as the scale of production increases.

5. Market Structures: Various types of market environments that influence pricing and output decisions.

- Perfect Competition: Many buyers and sellers, homogeneous products, and free entry and exit.
- Monopoly: A single seller dominates the market, leading to pricing power.
- Oligopoly: A few firms control the market, often leading to strategic interactions.
