Overview of NANDA Nursing Diagnosis List 2013

The **nanda nursing diagnosis list 2013** is an essential resource developed by NANDA International to standardize the terminology nurses use when identifying patient health problems. This list categorizes nursing diagnoses into specific labels based on clinical judgment and patient assessment. The 2013 edition reflects revisions and updates that incorporate the latest evidence and expert consensus to enhance relevance and clarity. It serves as a foundation for nursing documentation, communication, and education worldwide. By using this list, nurses ensure consistency in describing patient needs, which supports interdisciplinary collaboration and improves patient outcomes. The diagnoses included cover a wide spectrum of physical, psychological, social, and environmental factors affecting health.

Classification and Domains of Nursing Diagnoses

The NANDA nursing diagnosis list 2013 is organized into domains and classes that group related diagnoses for easier navigation and application. Each domain represents a broad area of human response, while classes are subdivisions that categorize diagnoses by specific aspects of health or dysfunction. This hierarchical structure aids nurses in systematically assessing patients and selecting appropriate diagnoses.

Domains in the 2013 List

The 2013 edition features several domains, including but not limited to:

- Health Promotion
- Nutrition
- Elimination and Exchange
- Activity/Rest
- Perception/Cognition
- Self-Perception
- Role Relationships
- Sexuality
- Coping/Stress Tolerance
- Life Principles
- Safety/Protection
- Comfort
- Growth/Development

Classes Within Domains

Each domain contains classes that further specify nursing diagnoses. For example, the “Activity/Rest” domain includes classes such as “Activity/Exercise” and “Sleep/Rest.” This detailed classification enables nurses to pinpoint precise patient problems and tailor interventions accordingly. The 2013 update refined some classes to improve clarity and usability in clinical settings.

Examples of Common Nursing Diagnoses from 2013 List

The **nanda nursing diagnosis list 2013** includes a wide variety of diagnostic labels that address different patient needs. Some frequently used nursing diagnoses from this edition include:

- **Acute Pain:** An unpleasant sensory and emotional experience arising from actual or potential tissue damage.
- **Impaired Physical Mobility:** Limitation in independent, purposeful physical movement of the body or of one or more extremities.
- **Risk for Infection:** Increased susceptibility to invasion and multiplication of pathogenic organisms.
- **Imbalanced Nutrition: Less than Body Requirements:** Intake of nutrients insufficient to meet metabolic needs.
- **Impaired Gas Exchange:** Excess or deficit in oxygenation and/or carbon dioxide elimination at the alveolar-capillary membrane.
