Understanding the Structure of the Dental Hygiene Board Exam

The practice dental hygiene board exam typically consists of two primary components: the National Board Dental Hygiene Examination (NBDHE) and a clinical board exam. The NBDHE is a comprehensive written test designed to assess a candidate's knowledge of dental hygiene science and clinical concepts. The clinical exam evaluates practical skills in a hands-on setting, including patient assessment, instrumentation, and treatment planning. Both parts must be passed to obtain licensure in most states.

National Board Dental Hygiene Examination (NBDHE)

The NBDHE is a computerized exam that covers a broad range of topics related to dental hygiene. It tests theoretical knowledge, critical thinking, and application of dental hygiene principles. The exam generally includes multiple-choice questions and sometimes clinical case-based scenarios to simulate real-world decision-making. Understanding the format and question types is vital for effective preparation.

Clinical Board Exam

The clinical board exam evaluates practical dental hygiene skills. Candidates perform procedures on patients or mannequins under observation, demonstrating proficiency in areas such as periodontal instrumentation, oral health assessment, and preventive techniques. This component emphasizes hands-on competence, patient communication, and adherence to infection control protocols.
