If your Roper washing machine won't start, it could be due to several factors:

- **Power Supply:** Check if the machine is plugged in and if there is power at the outlet.
- **Door Lock:** Ensure that the door is securely closed, as most models won't start if the door is ajar.

- **Control Settings:** Verify that the correct cycle has been selected.

2. Excessive Noise During Operation

Unusual noises can indicate problems with your washing machine. Common causes include:

- **Loose Items:** Check for loose coins or small items trapped in the drum.
- **Worn Bearings:** Worn-out bearings can create grinding noises.
- **Leveling Issues:** Ensure the washing machine is level, as an unbalanced unit can cause vibrations and noise.

3. Water Leaks

Water leaks can stem from various sources:

- **Hoses:** Inspect the inlet and drain hoses for cracks or disconnections.
- **Door Seal:** Check the door seal for wear or damage that could allow water to escape.
- **Detergent Drawer:** Ensure the detergent drawer is not clogged, leading to overflow.

Basic Troubleshooting Steps

Before diving into repairs, it's wise to perform some basic troubleshooting. Follow these steps:

1. **Check the Power:** Ensure the washing machine is plugged in and the outlet is functioning.
2. **Inspect the Hoses:** Look for kinks or blockages in the water supply hoses.
3. **Calibrate the Settings:** Make sure you've selected the correct wash cycle and options.
4. **Examine the Drainage:** Confirm that the drain hose is clear and not submerged in water.

If troubleshooting doesn't resolve the issue, you may need to perform some repairs. Here are some common repairs and how to approach them:

If the door lock is faulty, follow these steps:
